

OPERABLE GLASS WALL PORTABLE ACCORDION

PROJECT TIMBERFRAMED GLASSWALLS

Clay County Library Orange Park, FL

PROJECT DESCRIPTION

Hufcor GT Timberframed panels are used to create a private computer lab in this Florida library. The system includes an inline pass door and segmented panels that match the overhead soffit.

The GT omni directional timber framed system incorporates a full-height inline pass thru door system allowing accessible entrance and egress into the computer lab.

Hufcor offers a complete line of solid wood framed folding glass partitioning systems - Timberframed Glasswall. The cross-grain, triple laminated solid wood frames are constructed of solid oak, cherry, maple or Douglas Fir in standard thicknesses of either 1 3/4" or 2 1/4".

This gorgeous installation is at the Clay County Library in Orange Park, Florida, and has a few unique features including:

- A self-closing inset pass door that allows entrance and egress while the partition is extended in place.
- Segmented panels with custom mitred edges to match the layout of the overhead soffit
- 3/4" insulated glass that adds to the acoustical properties of the system

The library can now offer a semi-private space to conduct computer classes during open hours without disturbing other library patrons. Moreover, the library also can securely lock the computer "room" during off hours and without a clear sightline to the computers inside for added off-hours security.

Hufcor wood systems are supplied finished and in this case finished to match the rest of the library's furnishings. The Hufcor time-tested overhead track system allows the panels to be secured in place without the need for floor tracks.

For more information on Hufcor GT Timberframed glasswall systems, please contact your local distributor or Hufcor at 800-542-2371 Ext. 214.
